

## **TYPICAL SPECIFICATION**

### **TRAC-MOUNT® Idlers**

---

Included in the conveyor system will be numerous idlers installed for belt support and impact absorption.

To facilitate installation and service of these idlers, they shall feature a track-mount installation system. This track-mounting shall allow the removal of the entire idler assemblies, including the central roller, without requiring the raising of the belt or the removal of the idler base or adjoining idlers.

This track-mounting arrangement will allow idlers to slide straight in and out easily for maintenance or replacement as required. The track-mounted idlers shall be kept in position with a single fastener on each end, allowing fast, efficient access.

The supplier of the track-mounted idlers will be ISO 9001 quality system certified.

The idlers shall be TRAC-MOUNT® Idlers, as supplied by Martin Engineering, Neponset, Illinois.
