Introduction

General
The Martin® Vibrating Dribble Chute provides an effective, economical, low-maintenance method to return material removed by secondary belt cleaners and buildup on chute walls back to the main material flow. The action of the vibrator keeps material moving, rather than allowing it to adhere to the dribble chute.

The key to the Martin® Vibrating Dribble Chute’s success is the unique vibrator mounting bracket designed to reduce material accumulation without damaging the chute. This mount isolates the vibrator from the wall, reducing metal fatigue and structural damage.

References
The following documents are referenced in this manual:

• Federal Register, Volume 54, Number 169, Part IV, 29 CFR Part 1910, Control of Hazardous Energy Source (Lockout/Tagout); Final Rule, Department of Labor, Occupational Safety and Health Administration (OSHA), 32nd Floor, Room 3244, 230 South Dearborn Street, Chicago, IL 60604.

Safety
All safety rules defined in the above documents and all owner/employer safety rules must be strictly followed when working on the vibrating dribble chute.

Materials required
Standard hand tools are required to install and service this equipment.
Before Installing Vibrating Dribble Chute

1. Inspect shipping boxes for damage. Report damage to delivery service. Fill out damage report and return to Martin Engineering.

2. Remove vibrating dribble chute parts from shipping boxes. Equipment in boxes should include the following:
   - Martin® Vibrating Dribble Chute Assembly.
   - Cougar® Electric Vibrator.
   - Warranty card.
   - Damage report.

3. If anything is missing or damaged, contact Martin Engineering or a representative. Fill out warranty card and return to Martin Engineering.

**WARNING**

Before installing equipment, turn off and lock out/tag out energy source to conveyor and conveyor accessories.

4. Turn off and lock out/tag out energy source according to ANSI standards (see “References”).

**WARNING**

If equipment will be installed in an enclosed area, gas level or dust content must be tested before using a cutting torch or welding. Using a cutting torch or welding in an area with gas or dust may cause an explosion.

5. If using a cutting torch or welding, test atmosphere for gas level or dust content. Cover conveyor belt with fire-retardant cover.

6. Make sure mounting surface and vibrator are clean and free of debris.

**IMPORTANT**

Before installing dribble sheet, determine minimum clearance from dribble sheet to conveyor belt. Clearance of 1/2 in. (13 mm) is recommended so that belt will not catch vibrating dribble chute and damage it.
7. See Figure 1. Determine clearance for dribble sheet by checking movement of conveyor belt and splices while belt is loaded and unloaded. (Clearance of 1/2 in. [13 mm] is recommended.)

![Figure 1. Minimum Clearance for Vibrating Dribble Chute Installation](image)

8. Make sure location for slot allows clearance shown in Figure 1. (Clearance area is required to assemble unit and tighten vibrator mounting hardware.)
Installing Vibrating Dribble Chute

**IMPORTANT**
Read entire section before beginning work.

To install the vibrating dribble chute, follow the procedures corresponding to the following steps:

1. Install vibrating dribble chute mounting bracket onto chute wall.
2. Install dribble sheet and vibrator onto mounting bracket.

**NOTE**
Vibrator mounting bracket hangs on chute wall through “slot” cut into chute wall. Location of slot is determined by length and width of chute and location of structural supports.

1. See Figure 2. Determine where to cut mounting slot (A) in chute wall (B). Center slot under belt parallel to belt width.
2. Cut slot in chute wall and remove burrs and sharp edges.

![Diagram of Installing Mounting Bracket](image)

Installation

**CAUTION**

If chute wall is less than 1/4 in. (6 mm) thick, a piece of flat steel stock must be welded to the chute, parallel to and flush against the bottom edge of the slot. Chute wall could tear if not reinforced.

3. If chute wall is less than 1/4 in. (6 mm) thick, weld a piece of flat stock (C) 3/8 x 2 x 24 in. (9 x 51 x 610 mm) to the chute wall as shown in Figure 2.

4. Insert mounting bracket (D) through slot and hang on chute wall so mounting studs (E) are inside the chute.

**CAUTION**

Do not overtighten hex nuts when installing dribble sheet. Overtightening may cause polyethylene sheet to crack.

1. Install dribble sheet (F, Figure 2) onto mounting studs and secure with hex nuts and washers. Hand-tighten hex nuts to snug so dribble sheet does not crack from over-tightening.

2. Install vibrator (G) to mounting bracket according to Cougar® Zero–Frame Electric Vibrators Operator’s Manual, P/N M3892.

**IMPORTANT**

Make sure vibrator is set to produce less than 250 lbs of force. Exceeding 250 lbs of force may cause damage to dribble chute.

3. Verify vibrator is set to produce less than 250 lbs of force. Adjust eccentric weights according to vibrator operator’s manual.
Installing restraining cable

**WARNING**

If vibrator is mounted more than 6 in. (152 mm) above ground, install cable securing vibrator to structure. Without cable, vibrator could fall and cause injury.

1. Secure vibrator to structure by installing restraining cable as follows:
   a. Weld D-ring (A, Figure 3) onto structure wall (B) above vibrator.

![Diagram of Installing Restraining Cable](image)

Figure 3. Installing Restraining Cable

b. Loop 1/4-in. (6 mm) wire cable (C) through vibrator lifting eye (D) and D-ring on structure wall.

c. Leave no more than 2 in. of slack in cable.

d. Apply thread-sealing compound to nuts on cable clamps (E). Install four cable clamps (two on each end) to secure cable to vibrator eye and D-ring. Torque nuts on cable clamps to 15–30 ft-lbs.

e. Trim loose ends of wire cable.
After Installing Vibrating Dribble Chute

**IMPORTANT**
Read entire section before beginning work.

1. Make sure dribble sheet has 1/2 in. (13 mm) minimum clearance under conveyor belt.
2. Ensure eccentric weights on vibrator rotate in direction shown in Figure 2.

**WARNING**
Failure to remove tools from installation area and conveyor belt before turning on energy source can cause serious injury to personnel and damage to belt.

3. Remove all tools and fire retardant cover from installation area and conveyor belt.

**DANGER**
Do not touch or go near conveyor belt or conveyor accessories when conveyor belt is running. Body or clothing can get caught and pull body into conveyor belt, causing severe injury or death.

4. Turn on conveyor belt and vibrating dribble chute for 1 hour.
5. Observe vibrating dribble chute to make sure fugitive material is being returned to the main material stream.

**WARNING**
Before adjusting vibrating dribble chute, turn off and lock out/tag out energy source to conveyor belt and conveyor accessories.

6. After 1 hour of operation, turn off and lock out/tag out energy source according to ANSI standards (see “References”).
7. Make sure all fasteners are tight. Tighten if necessary.
8. If vibrating dribble chute is not moving material properly, see “Troubleshooting.”
Weekly Maintenance

**IMPORTANT**
Read entire section before beginning work.

**WARNING**
Before adjusting vibrating dribble chute, turn off and lock out/tag out energy source to conveyor belt and conveyor accessories.

1. Turn off and lock out/tag out energy source according to ANSI standards (see “References”).
2. Make sure all fasteners are tight. Tighten if necessary.
3. Check dribble sheet (F, Figure 2) to ensure minimum clearance is maintained. If belt has sagged, adjust vibrating dribble chute to prevent damage.
4. Make sure rubber liner (H) on mounting bracket (D) is not worn. If it is, replace as follows:
   a. Remove vibrator (G, Figure 2) and dribble sheet from mounting bracket.
   b. Remove mounting bracket from slot (A) in chute wall (B).
   c. Scrape off worn rubber liner using a chisel or putty knife.

**NOTE**
Use 3M™ Scotch-Grip™ High-Performance Contact Adhesive or equivalent to glue new rubber liner to mounting bracket.

d. Brush adhesive on both the new rubber liner and mounting bracket. Press rubber liner into place starting at chamfer end of mounting bracket. Clamp for at least 1 hour or until set.

**CAUTION**
Use only new Grade 5 bolts and lock nuts to install vibrator. Old fasteners can break and cause damage to vibrator or vibrating dribble chute.

e. Re-install mounting bracket, dribble sheet, and vibrator.

**IMPORTANT**

Failure to remove tools from installation area and conveyor belt before turning on energy source can cause serious injury to personnel and damage to belt.

6. Remove all tools from maintenance area.

Do not touch or go near conveyor belt or conveyor accessories when conveyor belt is running. Body or clothing can get caught and pull body into conveyor belt, causing severe injury or death.

7. Start conveyor belt.
